PIXNXT — Test run 3 Nov 2026

Code: `origin/cloudflare-migration` @ 43680fa9 (2 Nov, 26 commits since the 29 Oct run) · **Live:** pixnxt.in bundle `index-2CphLrRY.js` **Method:** fresh export, `npm ci`, Vitest, production build, ESLint, a scan of the live bundle, and code review of the new commits. No E2E yet (still no test accounts). Nothing pushed; one fix patch delivered.

Headline: the photographer's selection toolbar is broken on the live site. Fix is in patch 03, ready to apply.

Results

Check	Result
Unit tests	**223 / 223 pass** (29 files; was 165 on 29 Oct)
Production build	Pass
Lint	589 errors, 132 warnings. Mostly unused vars and hook rules. **4 are real crash bugs** (below)
Main JS bundle	6.7 MB raw / **1.6 MB gzip**. Heavy for guests opening galleries on 4G

Bugs found (fixed in `_claude-patches/03-fix-undefined-variable-crashes.patch`)

#	Severity	Where	What users see	Since
1	**Critical, live**	Delivery dashboard selection toolbar	Open / Star / Download / Move on selected photos fail. "Move to set" moves the photos, then says "Failed to move photos"	31 Oct (commit ab22db4d)
2	High	Album proofing, client comments	Client saves a comment and sees an error; **photographer never gets notified**	≤22 Oct
3	High	Album editor, albums with covers	Adding or removing spreads crashes	≤22 Oct
4	Low	Gallery grid	Grid crashes if a photo has no filename and filenames are shown	≤22 Oct

Bug 1 is confirmed in the live bundle: it still calls the removed `setShowSelectAllMenu`.

Security re-check

29 Oct finding	Status 3 Nov
R2 secret key in live bundle	**Fixed in live.** No key or credential code in the bundle. **Still needed from Sam: confirm the old key was rotated.** Removing it from the code does not invalidate the leaked copy
Stored XSS (photographer Terms/Privacy)	**Fixed.** Patch 02 merged; all render sites sanitised
Quota "disabled = unlimited"	**Fixed.** Patch 01 merged
`/api/crash-query` leaks admin token	**Fixed.** Now requires an admin bearer token
Committed build junk	**Fixed.** Removed
`/v1/emails/order-placed` unauthenticated	Not verifiable; API Worker source is still not in the repo
Server-side quota enforcement	Not verifiable; same reason

New commits reviewed: admin "delete user" calls `/v1/admin/photographers/:id` with typed confirmation (server auth not visible). Onboarding, sorting and responsive styling: nothing alarming.

Concern: upload concurrency

Commit 4ca5dabe raised adaptive concurrency to **start 8, floor 6, ceiling 16** (was 4 / 2 / 12). The 26 Oct test showed 20 parallel uploads stalling a 6 Mbps link. With a floor of 6, the uploader can't back off enough on weak broadband or a hotspot. Retest on a phone hotspot before keeping the floor at 6. Floor 2 is the safer default.

Asks

- **Devs (today):** apply patch 03 and redeploy. Add a `no-undef` lint gate before deploys; it would have caught all 4 bugs.
- **Sam:** confirm R2 key rotation, share the API Worker source, and give a staging URL plus 2 test accounts. E2E testing is blocked without them.
- **Next run:** E2E on staging, the hotspot upload retest, and cutting the 1.6 MB main bundle (code-split admin, album editor and Print Lab).
