Delivery cover — empty state spec

Oct 26, 2026 · @kharthik

Summary

The empty cover zone on a new delivery is getting the same dashed treatment as "New photo set". The From delivery and Upload buttons stay but move lower, and the gold gradient is removed. Four additions ship with it: drag-and-drop, button priority that follows photo count, an auto-cover fallback, and a focal-point picker. The focal point is stored per photo.

Reference build: `delivery-cover.html` (shared in chat).

Problems in the current version

Problem	Why it matters	Fix
Gold gradient fills the empty zone	Reads as if a cover is already set	Flat cream background with a dashed border
From delivery is active with 0 photos	Opens an empty picker, a dead end	Quiet dashed button with an "Upload photos first" tooltip
Two equal-weight buttons	No hierarchy; the user has to guess	Only one filled button, chosen by photo count
Icon and buttons both centred	Crowded; the call to action gets lost	Icon and hint in the upper-middle, buttons anchored to the bottom
Upload by button only	Photographers drag from Finder or Explorer	The whole zone is a drop target
Blank hero if skipped	Client gallery ships without a cover	Auto-cover fallback
No crop control	Faces get cut off on mobile	Focal-point picker

States and behaviour

Which button is primary depends on whether the delivery has photos, not on whether a cover is set.

State	Trigger	Primary button	Secondary button	Zone
Empty, no photos	New delivery, 0 photos	Upload (filled)	From delivery (quiet, dashed, tooltip "Upload photos first", `aria-disabled`)	Dashed border, cream background
Empty, photos uploaded	Photos ⩾ 1, no cover set	From delivery (filled)	Upload (outline)	Dashed border, cream background
Drag-over	A file is dragged over the zone	— (hidden)	— (hidden)	Solid terracotta border, peach-tint background, "Release to set cover"
Auto cover	Uploads finish and no cover was set	—	Change	Image fills the zone, "AUTO" badge top-left
Manual cover	User uploads or picks a photo	—	Change	Image fills the zone, no badge, focal point shown

Behaviour rules:

- Accepted types: JPG, PNG and WebP. Other file types are ignored on drop.
- Images under 1600px wide still save, but show a warning: "Low resolution — may look soft".
- Change opens the delivery photo picker when photos exist; otherwise it opens the file dialog.
- Clicking the image sets the focal point (x%, y%), which drives `object-position`.
- Auto cover uses the first landscape image. It runs server-side when uploads finish.
- Any manual set removes the AUTO badge permanently for that delivery.

Layout and visual spec

The dashed border must use the same QUIET token as "New photo set". Don't create a second dashed style.

Element	Spec
Zone	Aspect ratio 16:10, radius 12px, 1.5px dashed border, cream `#FBF6EE`
Icon and hint	Upper-middle (~22% from top); 26px photo-plus icon; 12px hint "Drop an image or choose one"; 11px sub-hint "16:9 · min 1600px wide"
Buttons	Pills, 13px/500 text, 8px gap, 22px from the bottom edge
Filled button	Ink background, cream text
Outline button	White background, 1px border
Quiet button	Transparent, dashed border, muted text
Drag-over	Solid terracotta `#B7682A` border, peach-tint background
AUTO badge	Jost 11px, ink at 75% opacity, top-left, 10px inset
Focal marker	18px ring, 2px white border
Caption	"DELIVERY COVER" (Jost 11px), right side: "Auto-picked if left empty" or "Click image to set focus point"

```
.cover-empty{
  aspect-ratio:16/10;
  border:1.5px dashed var(--q-border-dashed); /* same token as New photo set
*/
  border-radius:12px;
  background:var(--q-cream);
  display:flex;flex-direction:column;align-items:center;
  justify-content:flex-end;padding-bottom:22px;
}
.cover-empty.drag{
  border-style:solid;border-color:var(--q-terracotta);
  background:var(--q-drop-bg);
}
.cover.filled img{object-fit:cover;object-position:var(--fx) var(--fy);}
```

The hex values in the reference build are placeholders. Swap them for the actual QUIET token names.

Data model

Decision: the focal point is stored on the photo record, not on the delivery.

Record	Field	Type	Default
Photo	`focal_x`	integer, 0–100 (%)	50
Photo	`focal_y`	integer, 0–100 (%)	50
Delivery	`cover_photo_id`	photo reference, nullable	null
Delivery	`cover_source`	`auto` or `manual`	null

Why per photo:

- Switching the cover to a different photo doesn't carry over the wrong focus.
- Switching back keeps the original focus.
- Every surface that crops that photo can reuse it: gallery hero, Album Proofer, share previews, thumbnails.

An uploaded cover that isn't part of the delivery still becomes a photo record, with `focal_x` / `focal_y` stored the same way.

Engineering handoff

Notes for Sam's team:

- Delete the demo controls block in `delivery-cover.html` before integrating.
- Replace the hex values with QUIET token names.
- Run auto-cover selection server-side when uploads finish, not in the client.
- Read the focal point everywhere the photo is cropped, not just on this screen.

Acceptance criteria:

- [ ] The empty zone uses the same dashed token as "New photo set", with no gradient
- [ ] Buttons are anchored at the bottom, with only one filled
- [ ] With 0 photos, From delivery is quiet, shows its tooltip, and does nothing on click
- [ ] With 1 or more photos, From delivery becomes primary
- [ ] Dropping a JPG, PNG or WebP anywhere on the zone sets the cover
- [ ] Images under 1600px wide show the low-resolution warning
- [ ] Auto cover is applied when uploads finish with no cover set, and shows the AUTO badge

- [ ] Clicking the image saves `focal_x` / `focal_y` to the photo record
- [ ] The gallery hero and the proofer honour the saved focal point on mobile and desktop
- [ ] The zone is keyboard accessible: buttons can be reached with Tab and show a visible focus ring
